DETAILED ACTION

Notice to Applicant

1. This communication is in response to the amendments filed 1 September 2010 and 27 August 2010 and to the Pre-Appeal Conference request filed 16 June 2010. Claims 39-42, 44, 56, 62-63, 65-67, 70-72 have been amended. Claims 1-38 and 76 have been previously cancelled. Claims 39-75 are currently pending.

Claim Rejections - 35 USC § 112

2. The rejection of claims 39-75 under 35 U.S.C. §112, first paragraph was previously withdrawn (in paper number 20100720) due to the persuasive arguments detailed in the Pre-Appeal Brief Request for Review filed 16 June 2010.

Allowable Subject Matter

3. Claims 39-75 are allowed. The following is an examiner's statement of reasons for allowance:

Claims 39-75 are directed to facilitating food service management in a health care facility, in which a computer processor, utilizing a recipe database and a food item database containing nutritional information for each food item, evaluates nutritional contents of each food item to be used in recipes, both databases stored in a computer based system. Preselected

nutritional criteria are established, based on nutritional data, and these nutritional criteria are stored in memory and evaluated by a computer processor. Nutritional values associated with each recipe are verified by the computer processor. The computer processor, using the preselected nutritional data, creates menu sets of recipes for each of the established therapeutic diet types based upon the assigned food attributes, and stores the menu sets in a menu database. Nutritional information associated with menu sets is sent electronically to remotely located food service professionals. The computer based system also tracks an inventory of food items at the health care facility.

The closest prior art of record, Kolawa et al., U.S. Patent Number 6, 370, 51, discloses a computer processor evaluating nutritional contents of each food item to be used in recipes by utilizing a recipe database and a food item database containing nutritional information for each food item, both databases stored in a computer based system. Preselected nutritional criteria based on nutritional data is established and a computer processor stores and evaluates these nutritional criteria. Kolawa also teaches the computer processor verifying nutritional values associated with each recipe and creating menu sets for established therapeutic diet types using the preselected nutritional data, storing the menu sets in a menu database, and tracking an inventory of food items, however does not disclose or fairly suggest shaping menu sets of recipes for each of said established therapeutic diet types based upon the assigned food attributes, providing a remote link to food service professionals associated with the healthcare facility and

electronically sending nutritional information associated with the menu sets to food service professionals. Nor does Kolawa disclose tracking of food items at a health care facility.

Cosentino et al., U.S. Patent Number 6, 290, 646, teaches providing a remote link to food service professionals associated with a healthcare facility and electronically sending nutritional information associated with the menu sets to food service professionals, however does not disclose or fairly suggest shaping menu sets of recipes for each of the established therapeutic diet types based upon the assigned food attributes.

4. Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement for Reasons for Allowance."
